## TCEQ Mechanical Sources Historical Best Available Control Technology (BACT) Requirements Asphalt Processing and Asphalt Roofing Manufacturing

| Year | Source Type                           | Pollutant               | Minimum Acceptable<br>Control                                  | Control Efficiency or<br>Details   |
|------|---------------------------------------|-------------------------|--|------------------------------------|
| 2008 | Saturator                             | Particulate Matter (PM) | 99% reduction, outlet grain loading ≤ 0.01 gr/dscf             | Typically achieved with a baghouse |
|      |                                       |                         | 0.04 kg/Mg of asphalt shingle or mineral-surfaced roll roofing | NSPS Requirement                   |
|      |                                       |                         | 0.40 kg/Mg of saturated felt or smooth-surfaced roll roofing   | NSPS Requirement                   |
|      |                                       |                         | Opacity ≤ 20%  |                                    |
|      |                                       |                         | No visible emissions from capture system                       |                                    |
|      | Storage Silo and Material<br>Handling | PM                      | 99% reduction, outlet grain loading ≤ 0.01 gr/dscf             | Typically achieved with a baghouse |
|      |                                       |                         | Opacity of 0% from storage tanks                               |                                    |
|      |                                       |                         | Opacity ≤ 1% from mineral handling and storage                 |                                    |

| Year | Source Type   | Pollutant | Minimum Acceptable<br>Control   | Control Efficiency or<br>Details |
|------|---------------|-----------|---|----------------------------------|
| 2008 | Blowing Still | PM        | 0.67 kg/Mg from still when catalyst is used   | NSPS Requirement                 |
|      |               |           | 0.71 kg/Mg from still when No. 6 fuel oil is fired in the afterburner and when a catalyst is used | NSPS Requirement                 |
|      |               |           | 0.60 kg/Mg from still when catalyst is not used   | NSPS Requirement                 |
|      |               |           | 0.64 kg/Mg from still when No. 6 fuel oil is fired in the afterburner and a catalyst is not used  | NSPS Requirement                 |
|      |               |           | 0% opacity (unless using fuel oil in the afterburner)   | NSPS Requirement                 |
